

IPL PLAYER STATISTICS

A Data-Driven Look at Player Performance (2016 – 2025)

Afraz Hussain

Data Science Project • July 2026

Agenda

What this presentation covers

01

Project Objectives

Why this analysis was carried out

02

Dataset Overview

486 players, six recent-form metrics

03

Top Performers

Batting average, strike rate, matches played

04

Distributions & Relationships

Spread, scatter, and correlations

05

Case Study & Conclusion

Virat Kohli and key takeaways

Project Objectives

What we set out to answer with the data

- Build a clean, analysis-ready dataset from raw IPL player statistics
- Check data quality: missing values, duplicates, and structure
- Identify top performers by batting average, strike rate, and matches played
- Quantify relationships between batting and bowling metrics
- Visualize distributions and player-to-player comparisons
- Deliver a focused performance case study on a marquee player

Dataset Overview

Recent-form statistics, 2016–2025 IPL seasons

486

Player Records

6

Data Columns

0

Missing Values

0

Duplicate Rows

Columns in the dataset

- Player — player name
- Batting Avg — batting average
- Bowling Economy — economy rate
- Matches — matches played (recent form)
- Strike Rate — batting strike rate
- Bowling Avg Wickets — wickets per match

Top 10 Players by Batting Average

Vivrant Sharma and KA Jamieson lead a mixed field of specialists and stars

Top 10 Players by Strike Rate

Extreme values here reflect very small recent-match samples

Note: several leaders faced very few balls in the recent-form window, which inflates strike rate — see Limitations.

Most Experienced Players

Ten players share the maximum of 50 matches in the recent-form window

All ten of the following players also reached 50 matches in this window:

- RG Sharma
- HH Pandya
- AT Rayudu
- Harbhajan Singh
- AM Rahane
- I Sharma
- JC Buttler
- KA Pollard
- R Ashwin
- F du Plessis

Distribution of Batting Average

Right-skewed: most players cluster low, with a long tail of specialists

Relationships & Spread

Batting average vs strike rate, and the spread of bowling economy

Batting Avg vs Strike Rate

Bowling Economy Spread

Correlation Between Metrics

Batting average and strike rate move closely together

Case Study: Virat Kohli

A benchmark for consistency across IPL seasons

Batting Average

52.33

Ranking

Top 10 of 486 players

Profile

High average with a strong, consistent strike rate

Key Insights

What the numbers tell us

Highest Batting Average

Vivrant Sharma — 69.00

Highest Strike Rate

L Wood — 300.00

Most Matches Played

RG Sharma — 50

Avg Batting Average (all)

16.38

Avg Strike Rate (all)

97.52

Avg Bowling Economy (all)

6.34

Conclusion

- 486 IPL players analyzed with a clean, complete dataset — zero missing values, zero duplicates
- Batting average and strike rate are strongly correlated ($r = 0.70$)
- Experienced players (more matches) tend to bat more consistently
- Specialist bowlers and batsmen sit at opposite ends of the economy-rate spectrum
- Virat Kohli confirms the value of long-run consistency, ranking top 10 in batting average
- Small recent-form samples can inflate strike rate — treat outliers with caution
